

Ikarus::utils::globalIndex  
FromGlobalPosition

Ikarus::utils::obtainLagrange  
GlobalNodePositions

Ikarus::utils::forEachLagrange  
NodePosition

```
graph LR; A[Ikarus::utils::globalIndex<br/>FromGlobalPosition] --> C[Ikarus::utils::forEachLagrange<br/>NodePosition]; B[Ikarus::utils::obtainLagrange<br/>GlobalNodePositions] --> C;
```

The diagram illustrates a data flow where two separate inputs are processed by a single function. On the left, there are two white rectangular boxes. The top box contains the text 'Ikarus::utils::globalIndex' followed by 'FromGlobalPosition' on a new line. The bottom box contains 'Ikarus::utils::obtainLagrange' followed by 'GlobalNodePositions' on a new line. Blue arrows point from the right side of each of these two boxes to the left side of a single gray rectangular box on the right. This gray box contains the text 'Ikarus::utils::forEachLagrange' followed by 'NodePosition' on a new line.
