

Ikarus::utils::globalIndex
FromGlobalPosition

Ikarus::utils::obtainLagrange
GlobalNodePositions

Ikarus::utils::forEachLagrange
NodePosition

```
graph LR; A[Ikarus::utils::globalIndex<br/>FromGlobalPosition] --> C[Ikarus::utils::forEachLagrange<br/>NodePosition]; B[Ikarus::utils::obtainLagrange<br/>GlobalNodePositions] --> C;
```

The diagram illustrates a data flow where two separate inputs are combined into a single output. On the left, there are two white rectangular boxes with black borders. The top box contains the text 'Ikarus::utils::globalIndex' followed by 'FromGlobalPosition' on a new line. The bottom box contains 'Ikarus::utils::obtainLagrange' followed by 'GlobalNodePositions' on a new line. Two blue arrows originate from the right side of these boxes and point towards a single gray rectangular box with a black border on the right. This gray box contains the text 'Ikarus::utils::forEachLagrange' followed by 'NodePosition' on a new line.
